**Subject:** Invenenergy AEC Modeling Comment Response

Riley,

**Ex. 6 Personal Privacy (PP)** so I wanted to give you an update on my review of the response (to our modeling comments) ACHD sent us. I've reviewed all of their responses and they have adequately addressed everything we commented on, with one exception. They claimed that they redid the modeling and it showed no model violations for the project. I reviewed the files they sent us and there is still 1 model receptor that violates the 1-hr NO2 NAAQS. Their refinements did lower concentrations but not enough to get this one single receptor (and violation) under the 1-hr NO2 NAAQS. I sent something earlier in the week asking them to double check what they sent us but haven't heard back yet.

This model violation DOES NOT affect the application. The applicant has already shown that it's contribution to this modeled exceedance is below significance levels so the application can move forward. I hope to hear back and finalize this next week. Let me know if this causes any issues for your review. Have a good weekend.
